Category Type = CONCATENATE('Order Details(1)'[Category], 'Order Details(1)')[Sub-Category]

I use concatenate function for combining category and sub-category by using new column.

- Calculate Revenue per Order in Order Details Table: Create a calculated column in the Order Details table to compute the revenue (Amount * Quantity) per order.

1 Revenue = 'Order Details(1)'[Amount]*'Order Details(1)'[Quantity]

Amount	Profit	Quantity	Category	Sub-Category	Category Type	Revenue
561	212	3	Clothing	Saree	ClothingSaree	1683
119	-5	8	Clothing	Saree	ClothingSaree	952
193	-166	3	Clothing	Saree	ClothingSaree	579

24	-9	4	Clothing	Saree	ClothingSaree	96
711	-8	4	Clothing	Saree	ClothingSaree	2844

Here I calculate revenue per order using amount *quantity.

- Create a Calculated Column to Categorize Sales: Add a calculated column named 'Sales Category' in the Order Details table that categorizes each order as 'Above Average' or 'Below Average' based on the Amount value.

1 Sales Category = IF('Order Details(1)'[Amount]<750,"Below Average","Above Average")

Amount	Profit	Quantity	Category	Sub-Category	Category Type	Revenue	Sales Category
561	212	3	Clothing	Saree	ClothingSaree	1683	Below Average
119	-5	8	Clothing	Saree	ClothingSaree	952	Below Average
193	-166	3	Clothing	Saree	ClothingSaree	579	Below Average
157	5	9	Clothing	Saree	ClothingSaree	1413	Below Average
75	0	7	Clothing	Saree	ClothingSaree	525	Below Average
25	-5	4	Clothing	Saree	ClothingSaree	100	Below Average
43	0	3	Clothing	Saree	ClothingSaree	129	Below Average

149	-87	4	Clothing	Saree	ClothingSaree	596	Below Average
635	-349	5	Clothing	Saree	ClothingSaree	3175	Below Average
24	-9	4	Clothing	Saree	ClothingSaree	96	Below Average
711	-8	4	Clothing	Saree	ClothingSaree	2844	Below Average
382	30	3	Clothing	Saree	ClothingSaree	1146	Below Average
637	113	5	Clothing	Saree	ClothingSaree	3185	Below Average
122	-47	4	Clothing	Saree	ClothingSaree	488	Below Average

Here i calculate new column for sales catogory for amount is below average or above average.

Calculated Measures

1. Order Count- Create a measure that calculates the total number of orders in the Order

Details table.

2. Average Profit in Delhi- Create a measure that calculates the average profit for orders placed in Delhi.

Data Visualization

Create the following visualizations using Power BI:

- Sales Target Achievement by Category: Compare actual sales with sales targets by category using a clustered column chart.

Here i drop the category column in x axis and sum of target and actual sales in y axis.

- Max Profit Margin by Sub-Category: Analyze the maximum profit margin for each sub-category of products using a donut chart.

Here i drop sub catogory in legend and sum of profit in values.

- Monthly Sales Trend: Show the trend of monthly sales over time using a line Chart.

Here i drop month in x axis and sum of revenue in y axis and sum of profit in secondary y axis.

- Comparison of Profit and Quantity by Sub-Category: Compare the relationship between profit and quantity sold for different sub-categories using a scatter chart.

- Comparison of Total Sales Amount and Target: Create cards to succinctly display the total sales amount alongside the sales target for quick comparison.

- Sales Performance Matrix: Build a matrix view to analyze how actual sales compare to sales targets across different categories and months.
